

MDM Permian, Inc.

Permian Field Work Update

Carrollton, Texas, March 08, 2021 - MDM Permian Inc. (OTCPK: MDMP) today has announced the results of the refurbishment of the Lindley A lease wells, Irion County, Texas.

LINDLEY 'A' LEASE WELLS

March 02, 2021, Permian Services, LLC, Midland Texas, moved a rig onto the Lindley 1-A well. On Wednesday we ran a packer to isolate and pressure test for holes in the casing at shallow depths. A hole was located at a depth of 2198 ft. We ordered Powerflex Cementing, LLC, Winters, Texas to apply a 150-sack squeeze job to patch the hole and stop the water infiltration. The attempt was successful, and we contracted a reverse unit from Basic Services to drill out the cement job. After that was done, a Mechanical Integrity Test was run on the well by Tri-Best, Inc.

We then moved Tri-Best to the Lindley 2-A well to do a MIT. The charts from both tests are being submitted to the RRC.

The planning of the next phase of our work is the completion of the Clearfork at 3800 ft. on the 1-A well. At the same time, we will be re-building the A-Lease tank battery. The current tank battery is located at the top of the Mesa near the 1-A well. We will re-build the new battery at the bottom of the Mesa near the new tank battery built for the Lindley 6103 well.

RESERVIOR ESTIMATES/BUILDING VALUE IN THE GROUND

The Advanced Reservoir Characterization that was done by NuTech Energy Alliance is not only crucial to the planning of the completion of the existing wells, but also an important factor for determining the reservoir extent of our acreage. As stated in our original Permian Business Plan, we are building value in the ground.

Last month we reported the results of the NuTech Advanced Reservoir Characterization. The study indicates that on the Lindley A lease, the Clearfork contains 3,578,310 barrels of recoverable oil per 640 acres. The San Angelo contains 5,158,000 barrels of recoverable oil per 640 acres. The reservoirs calculate to \$567,860,150. @ \$65. oil for the 2 zones combined. Our 1680-acre Lindley Ranch is estimated to contain 13,565,540 barrels of recoverable oil equivalent or expressed as dollar value, \$881,760,100. These represent the Clearfork and San Angelo and have not considered other proven zones.

The Canyon Sands have not yet been calculated and will significantly add to the total as our engineer estimates that the wells only achieved a 4% recovery.

As a public company, inground reserves can be added to the books as an asset. These reserves will significantly increase the value of the company when added.

About MDM Permian, Inc.:

Based in Carrolton, Texas, MDM Permian, Inc. is a publicly traded energy company with interests in oil and natural gas wells, mineral prospects. The Company's business plan includes building value through reserves and production in the Permian Basin of Texas. MDM Energy, Inc. (the wholly owned operating subsidiary of MDM Permian, Inc.), has been actively involved in the oil and gas industry since 1981 with offices located in Carrolton, Texas.

Michael Rafael has nearly 40 years of experience in the oil and gas industry, serving as founder, President and Chief Executive Officer of MDM Energy, Inc. ("MDM").

Mr. Rafael has been directly involved in the drilling, completion, and operation of over 300 oil and gas projects, primarily in the Illinois Basin, and directly supervises and oversees field operations. Mr. Rafael works directly with contract geologists, petroleum engineers and geophysicists from start to finish.
